

PURAFISH®

Natural Liquid Fertiliser

Purafish®, being totally derived from organic sources, contains amino acids and minerals in natural form that are much more readily available to plants. The nitrogen is in the form of peptides and amino acids, which slowly break down when added to soils, thereby reducing leaching losses and increasing nitrogen availability to plants over a longer period of time.

Liquid fish fertilisers have been used for centuries throughout the world to improve soil fertility and plant growth. Purafish by Omnia is manufactured using a low temperature, natural enzyme process which preserves the nutritional value of the protein and essential plant nutrients.

Benefits of Purafish include:

- Increased microbial and earthworm activity
- Improved efficiency of other fertilisers
- Natural chelating properties
- Provides natural nutrients immediately available to the plant

Purafish can be applied through spray or dripper systems or as foliar spray. It should be diluted with water before spraying onto foliage.

Application Rates:

Foliar: For most crops 5-8L/ha in a minimum of 400L of water/ha. Do not store diluted or mixed product.

Soil: 5-20L/ha applied 1-3 times annually.

(When mixing with other liquid fertilisers, test for compatibility with a small quantity in a jar.)

Typical Analysis

Analysis	% w/v
Nitrogen	2.50
Phosphorus	1.25
Total Solids	23.0
Amino Acids
